Austral Wright Metals distributes stainless steels, copper, aluminium and nickel alloys and high technology specialty metals to the Australian metal manufacturing and fabrication industries. We are Australia's biggest supplier of copper and copper products, second biggest supplier of cold rolled stainless steel, and a substantial supplier of nickel alloys.

Headquartered in Wetherill Park, NSW, we have sales offices & warehouses in all the states of Australia. Each sales office has a local warehouse, from which products are distributed.

Our Metal Processing Centre can slit and sheet coils of stainless steel and copper and brass, and can linish the surface to a decorative finish (N4). The WA sales office has plasma equipment for cutting stainless steel plate to size and shape.

Our engineers have a wealth of experience in the specification, manufacture, sourcing and use metals, and can help in the development phase of your project to ensure you get the right metal for the job.

,	
Merchandising	Same or next day supply from stock of a broad range of stainless steels, non ferrous and special metals as detailed below. Supply of less common items in a longer time frame, for sufficient quantity.
Copper, Brass and Aluminium	All copper based alloys and aluminium alloys Wrought and cast Plate, sheet, coil, foil, bar, wire, extrusions, tube & pipe, fittings, fixings, ammunition – brass and gilding metals cups, live ammunition (ball and tracer), driving bands
Stainless Steel	All stainless steels Wrought and cast Plate, sheet, coil, bar, wire, sections, tube & pipe, fittings, fixings
Specialty Metals	All non ferrous metals, especially high performance copper and nickel alloys, titanium, zirconium, tantalum. Hastelloys and Haynes highly corrosion and heat resistant alloys. Inconels and Incoloys highly corrosion and heat resistant alloys. Wrought, cast, fabricated components eg domed ends, tube sheets, cores, boat shafting, nickel alloy weldments and fabrications. Plate, sheet, coil, bar, wire, sections, tube & pipe, fittings, fixings. Foundry master alloys, pigments. Zinc sheet for roofing etc. Welding & brazing consumables for non ferrous metals and stainless steels.
Projects	We assemble packages of materials for major projects. We offer assistance in design, specification of products and fabrication methods, drawing on experience in metals manufacturing, specification and design.
Metal Processing	Processes stainless steel and nonferrous flat rolled product up to 1500mm wide at thicknesses of 0.45 to 2.5 mm. Facilities include slitting, sheeting, blanking, guillotining, circle cutting, plasma-arc cutting and coil polishing and plastic coating.
